

## **Suzuki Burgman 400 Oil and Filter Change - from Jason Powell**

Time and Ease: Easy - under 30 minutes

Tools/Supplies: Oil, oil filter, oil wrench, o-ring, drain pan, rag, funnel, socket set

Step 1: Place the vehicle on the center stand. The engine should be warm so the oil can easily drain but WAIT until the muffler and oil drain plug are cool enough to touch with your bare hands.

Step 2: Place an oil pan below the engine and drain the oil by removing the drain plug (2) and filler cap (1).

Step 3: Remove oil filter cap (3) and replace o-ring (4). Why change the filter? See pic #5... that's after 600 miles... it's a \$5 part... replace it!

Step 4: Apply engine oil lightly to the o-ring before installation. Replace new oil filter (7) and oil filter cap with new o-ring (6).

Step 5: Tighten the filter cap and replace the drain plug (2).

Step 6: Add 2 quarts of 10w 40 (1900ml) and replace oil fill cap (1).

Step 7: Reset oil change light by holding down adjust while turning vehicle on.

Step 8: Clean up
